An adaptable contribution to your team

Dear Hiring Manager,

I am interested in an opportunity where I can contribute practical problem solving, clear communication and dependable service. My six years of combined experience span running a business, advising clients, coordinating projects, retail sales and creative work. I am comfortable learning a new industry, working directly with customers and taking responsibility for the details that help a team deliver.

As founder of Skyline Dynamics Inc., a U.S. company based in Delaware, I worked remotely from Cobourg with American clients ranging from startups to established businesses. I generated more than US\$300,000 in earned revenue and secured more than US\$500,000 in signed contract value. These engagements covered healthcare, real estate, automotive, fintech, fashion, e-commerce and other sectors. Alongside development and design work, I handled business administration, clarified requirements, planned delivery and maintained client relationships.

My consulting role with BISON ONWARD CONSULTING CENTER LLC strengthened that approach. I brought information from client meetings into team discussions, delegated tasks, coordinated agile work and contributed documentation and implementation. I also bring experience in office management, advanced PowerPoint, business intelligence and marketing strategy, as well as managing a three-person B2B/wholesale sales team.

Customer-facing and creative work have been equally important to my background. At Sport Chek, I helped customers find suitable products and supported transactions, inventory and store operations. Through Fiverr, I earned more than CA\$15,000 in 3D-design sales, working with clients to develop custom assets and respond to feedback. My UI/UX internship, freelance development and open-source project contributions add a careful eye for presentation, collaboration and usability.

I have completed all coursework, credits and the final project for my BSc in Computer Science at the University of London; results, graduation and the formal degree award are expected in December 2026. Certifications and professional learning from Google, IBM, HarvardX and MITx complement that study. I am ready to bring this mix of service, business judgment and technical fluency to a role suited to your team's needs.

You can explore my experience and projects at lukodevelops.pages.dev. I would welcome the opportunity to discuss how I could contribute to your organization. Thank you for your consideration.

Sincerely,

Lukas Zemolochinas
