An adaptable contribution to your team

Dear Hiring Manager,

I bring six years of combined experience in business leadership, consulting, client service, retail and design. I am interested in an opportunity where I can put that background to practical use: understanding what people need, organizing the work and helping a team deliver. I am comfortable learning a new industry and taking responsibility for the details.

As founder of Skyline Dynamics Inc., a Delaware-based U.S. company, I led an international team of 15-20 while working remotely from Cobourg. I generated US\$300,000+ in earned revenue and secured US\$500,000+ in signed contract value. My responsibilities combined client relationships and technical delivery with budgeting, forecasting, financial planning, taxes and administration. Clients ranged from startups to established organizations across health, finance, commerce, industrial and service sectors. I also joined discussions about quarterly and annual priorities and presented improvement suggestions.

At BISON ONWARD CONSULTING CENTER LLC, I advised clients on requirements, business spending and technology-investment choices, summarized meetings and coordinated developer tasks and agile work. On Upwork, I led an agency of 8-10 specialists spanning development, AI/ML, DevOps and project prospecting; that agency generated an estimated US\$50,000 in revenue. These roles taught me to connect client conversations with a workable plan and clear responsibilities.

Customer-facing and creative work add another perspective. At Sport Chek, I helped customers compare products and supported transactions, inventory and store operations. Through Fiverr, I earned more than CA\$15,000 in 3D-design sales, working with clients on custom assets and revisions. My UI/UX internship and open-source contributions further developed my attention to presentation, collaboration and usability.

I have completed all coursework, credits and the final project for my University of London BSc in Computer Science; results and the formal degree award are expected in December 2026. You can explore my experience and projects at lukodevelops.pages.dev. I would welcome a conversation about how I could contribute to your team. Thank you for your consideration.

Sincerely,

Lukas Zemolochinas
